

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) An interior material of an operator's cab for a work machine, comprising: ~~at least~~

a structure member including a ~~and a noise absorption layer, wherein~~
~~the structure member has at least one rib which is formed~~ located on an inside surface of a base portion ~~thereof of the structure member, the rib intimately contacting and comes into intimate contact with~~ an inside surface of an exterior material ~~[[,]] with which the rib has a hermetically sealed hollow portion; and is formed by the rib in intimate contact with the exterior material;~~

~~[[the]] a noise absorption layer is disposed on~~ attached to at least one of an
outside surface of the structure member, ~~[[and]] the inside surface of the structure member and a part of the surface or an entire surface of the rib, such that the hermetically sealed hollow portion is not entirely occupied by the noise absorption layer are provided with the noise absorption layer without eliminating the hollow portion.~~

2. (Cancelled).

3. (Currently Amended) An interior material of an operator's cab for a work machine, comprising: ~~at least~~

a structure member ~~and a noise absorption layer, wherein the structure member has at least one~~ including a rib ~~which is formed~~ located on an inside surface of a base portion thereof and ~~comes into intimate contact~~ intimately contacting ~~[[with]]~~ an inside surface of an exterior material ~~[[,]] with which the rib has a hermetically sealed hollow portion; and is formed by the rib in intimate contact with the exterior material;~~

~~[[the]]~~ a noise absorption layer ~~is disposed on~~ integrally attached to an outside surface of the structure member, and the inside surface of the structure member confronting the exterior material ~~is provided with the noise absorption layer without eliminating the hollow portion,~~ wherein the noise absorption layer occupies less than an entire volume of the hermetically sealed hollow portion.

4. (Previously Presented) The interior material according to claim 1, wherein the structure member is formed of any one of polyurethane, polypropylene, ABS resin, and AES resin.

5. (Currently Amended) The interior material according to any of claims 1 ~~and 3~~, wherein the noise absorption layer is ~~at least any one of a continuous foam body and a woolie fiber aggregate formed of at least one of low repulsion urethane, semi-rigid urethane, PET resin, and polystyrene resin.~~

6. (Previously Presented) The interior material according to claim 1, wherein a surface clad material is attached to a surface of the noise absorption layer opposite to a structure member side.

7. (Previously Presented) The interior material according to claim 6, wherein the surface clad material is subjected to a dirt prevention treatment.

8. (Currently Amended) A panel forming body of an operator's cab for a work machine, comprising: ~~at least~~

~~a structure member and a noise absorption layer, wherein: the structure member has at least one~~ having two ribs ~~rib which is~~ that are formed on an inside surface of a base portion thereof, and that are separated from and positioned adjacent to each other on the inside surface of the base portion of the structure member; ~~and comes into intimate contact with an inside surface of an exterior material;~~

an exterior material having an inside surface, the two ribs intimately contacting

the inside surface of the exterior material to form a hermetically sealed hollow portion; and, a wall of which being formed by the at least one rib and a portion of the exterior material adjacent the rib,

~~[[the]] a noise absorption layer is disposed~~ positioned on at least one of an outside surface of the structure member, [[and]] the inside surface of the structure member and a part of the surface or an entire surface of the two ribs [[rib]] are provided with the noise absorption layer without eliminating the hollow portion.

9. (Cancelled).

10. (Cancelled).

11. (Currently Amended) A panel forming body of an operator's cab for a work machine, comprising: ~~at least~~

~~a structure member and a noise absorption layer, wherein the structure member has at least one including a rib which is formed~~ located on an inside surface of a base portion thereof, and intimately contacting and comes into intimate contact with an inside surface of an exterior material[[,]] with which the rib has a hermetically sealed hollow portion is formed by the rib in intimate contact with the exterior material, the structure member being made entirely of a synthetic resin material; and

~~[[the]] a noise absorption layer is disposed on~~ positioned at least one of an outside surface of the structure member[[,]] and at least a part of the inside surface of the structure member confronting the exterior material is provided with the noise absorption layer without eliminating such that less than all of the hollow portion is occupied with the noise absorption layer.

12. (Previously Presented) The interior material according to claim 1, wherein the noise absorption layer interfaces with the inside surface of the structure member and a part of the surface or an entire surface of the rib.

13. (New) The interior material of claim 5, the woolie aggregate is one of low repulsion urethane, semi-rigid urethane, PET resin, and polystyrene resin.

14. (New) The interior material according to claim 3, wherein the noise absorption layer is at least any one of a continuous foam body and a woolie fiber aggregate

15. (New) The interior material of claim 14, the woolie aggregate is one of low repulsion urethane, semi-rigid urethane, PET resin, and polystyrene resin.

16. (New) The interior material according to claim 3, wherein the base portion includes a hole passing from the outside surface thereof to the inside surface thereof, the hole for attaching to a mold using which the noise absorption layer is integrally attached to the outside surface of the structure member.

17. (New) The interior material according to claim 1, wherein the base portion includes a hole passing from the outside surface thereof to the inside surface thereof, the hole for attaching a mold using which the noise absorption layer is attached to the outside surface of the structure member and the inside surface of the structure member.

18. (New) The interior material according to claim 1, wherein the base portion includes a hole passing from the outside surface thereof to the inside surface thereof, the hole for attaching a mold using which the noise absorption layer is attached to all three of the outside surface of the structure member, the inside surface of the structure member and a part of the surface of the rib.

19. (New) The interior material of claim 1, wherein the noise absorption layer attached to at least one of an outside surface of the structure member, the inside surface of the structure member and a part of the surface of the rib, such that at least a portion of the hermetically sealed hollow portion is entirely hollow.

20. (New) The interior material of claim 3, wherein the noise absorption layer integrally attached to an outside surface of the structure member, and the inside surface of the structure member confronting the exterior material such that at least a portion of the hermetically sealed hollow portion is entirely hollow.
